

## **Prefatory Note**

The attached document represents the most complete and accurate version available based on original copies culled from the files of the FOMC Secretariat at the Board of Governors of the Federal Reserve System. This electronic document was created through a comprehensive digitization process which included identifying the best-preserved paper copies, scanning those copies,<sup>1</sup> and then making the scanned versions text-searchable.<sup>2</sup> Though a stringent quality assurance process was employed, some imperfections may remain.

Please note that some material may have been redacted from this document if that material was received on a confidential basis. Redacted material is indicated by occasional gaps in the text or by gray boxes around non-text content. All redacted passages are exempt from disclosure under applicable provisions of the Freedom of Information Act.

---

<sup>1</sup> In some cases, original copies needed to be photocopied before being scanned into electronic format. All scanned images were deskewed (to remove the effects of printer- and scanner-introduced tilting) and lightly cleaned (to remove dark spots caused by staple holes, hole punches, and other blemishes caused after initial printing).

<sup>2</sup> A two-step process was used. An advanced optical character recognition computer program (OCR) first created electronic text from the document image. Where the OCR results were inconclusive, staff checked and corrected the text as necessary. Please note that the numbers and text in charts and tables were not reliably recognized by the OCR process and were not checked or corrected by staff.

July 23, 1971.

MONETARY AGGREGATES AND  
MONEY MARKET CONDITIONS

Recent Developments

(1) Growth of the narrowly-defined money supply in July appears to be somewhat faster than projected in the last blue book, as best can be judged by information available through the week of the 21st, with data for the latter week partly estimated. The broader money supply (M<sub>2</sub>) appears to be increasing less rapidly than projected, however, as a substantial short-fall below path in time deposits other than CD's more than offset the overshoot in private demand deposits. And with U.S. Government deposits much weaker than expected and nondeposit sources of funds continuing to decline on balance, the bank credit proxy appears to be falling very considerably short of expectations in July.

<sub>1/</sub> Estimated on the basis of partial data.  
pe -- Partially estimated.

(3) In the first half of July, following the relatively weak end-of-June behavior of the aggregates, the Desk aimed at a Federal funds rate generally in the lower half of the 5--5-1/2 per cent range; and during those weeks the effective Federal funds rate averaged just slightly over 5-1/8 per cent. As early indications of the strength in M<sub>1</sub> in July were confirmed, however, and with the increase in the discount rate to 5 per cent, the Desk has most recently moved to promote a Federal funds rate at about the upper end of the range.

(4) During the first three statement weeks of July member bank borrowings averaged about \$930 million, about \$415 million above the June average. Apparently in recent weeks many banks that had borrowed relatively little at the discount window have become more willing borrowers, given the spread of the Federal funds rate above the discount rate. Excess reserves

have been volatile over the past three weeks, and net borrowed reserves of member banks have ranged from \$350 to \$950 million, with the average level considerably deeper than in June.

<sup>1/</sup> Alternative B.

(5) Although  $M_1$  in July has turned out to be somewhat stronger than previously projected, the need for reserves in the first three weeks of the month was considerably less than expected (as shown by the difference between "path" and "actual" required reserves in the table above). The lower level of required reserves relative to path was mainly the result of large downward adjustments in preliminary estimates of private demand deposits during the last two weeks of June, and much lower than expected U.S. Government deposits in early July. Thus, with the need for reserves reduced, growth of member bank total reserves in July is falling substantially short

of what was implied by the alternative B path at the time of the last Committee meeting, as shown in the table above, despite the sharp rise in member bank borrowings. Nonborrowed reserves were even further below path than total reserves--and showed an actual decline from June to July --as the Desk provided fewer reserves given the increased demand for borrowings by banks.

(6) Market interest rate adjustments to the increase in the Federal funds and discount rates have been relatively modest. After an initial upward adjustment of from 10 to nearly 30 basis points to the discount rate announcement, the bill market strengthened, partly in reflection of large foreign demands and expectations of some re-investment demand from holders of "rights" who may not wish to opt for the longer-term offerings in the exchange position of the financing. This strength faded most recently, and the 3-month bill closed on Friday at 5.45 per cent, a little above its level just prior to the discount rate hike, and well above its 5.19 per cent level at the time of the June 29 FOMC meeting. Reflecting the discount rate action and also the Treasury financing, yields on Treasury coupon-bearing securities rose by about 10 to 20 basis points after mid-month. Other short- and long-term yields showed very little reaction to the System's firmer policy stance.

(7) On July 21, the Treasury announced that holders of the \$5.1 billion of securities maturing on August 16, \$4.1 billion of which are publicly held, would be able to exchange those issues for either a 4-1/4 year note yielding 7.06 per cent or a 10-year bond at a yield of 7.11 per cent. It was also announced that, in the case of the 10-year bond, cash

subscriptions by individuals up to \$10,000 would also be accepted. Although a good deal of individual interest seems to be developing, this latter feature is not expected to raise much new cash according to Treasury comments. A cash auction of an 18-month note in early August is expected to cover attrition in the exchange and to raise around \$1 billion in new money, and an additional cash offering of \$2 billion or so--probably in tax bills--is anticipated for late August.

(8) The table on the following page summarizes seasonally adjusted annual rates of change in major financial aggregates for selected periods.

	4th and 1st Qtrs. combined (March over Sept.)	Second Quarter (June over March)	July over June
Total Reserves	8.9	6.6	3.1

2/ Based on month-end figures. Includes loans sold to affiliates and branches.

N.S.A. Not seasonally adjusted.

NOTE: All items are based on averages of daily figures, except for data on total loans and investments of commercial banks, commercial paper and thrift institutions--which are either end-of-month or last Wednesday of month figures.

Prospective Developments

(9) The table on the next page shows two paths for monetary aggregates between now and year-end. Money market specifications thought to be consistent with these paths are summarized in the table below.<sup>1/</sup>

	<u>Alternative A</u>	<u>Alternative B</u>
Federal funds rate	5-1/2%	5-1/2--6%
Member bank borrowings	\$.8--\$1 billion	\$.9--\$1.2 billion
3-month bill rate	5-3/8--5-5/8%	5-1/2--6-1/8%
Growth in M <sub>1</sub> (SAAR)		
August	6%	5-1/2%
September	8-1/2%	8%
3rd Quarter	9%	8-1/2%
4th Quarter	4%	2-1/2%

---

(10) The money market specifications for alternative A represent a continuation of conditions recently prevailing, as would be consistent with a strict interpretation of "even keel". The current Treasury refunding will be settled on August 16, only about a week before the next FOMC meeting. It is possible also that conditions following the settlement date will present more than the usual constraint on open market operations in view of the greater price risk in the distribution process of a long-term offering. Specifications for alternative B, on the other hand, would envisage a gradual firming of the money market, to the extent permitted by the Treasury financing, to a Federal funds rate of 6 per cent by late in the inter-meeting period; a funds rate fluctuating around 6 per cent has been assumed for the alternative B paths for the monetary aggregates.

---

(11) Growth in narrowly defined money ( $M_1$ ), given current money market conditions, is expected to slow between now and year-end. There are a number of reasons for this. First, the apparent broad build-up in pre-cautionary demand balances over the past few months is likely to abate as liquidity demands are sated and as gradual economic recovery helps to restore consumer confidence. Second, the cumulative impact of the higher short-term interest rates of the past several months will be making the high cost of holding cash more and more evident. Third, the recent tendency for credit markets to stabilize may attract funds of small or medium-size investors who had temporarily permitted cash balances to rise in anticipation of higher interest rates.

(12) While there are reasons to expect slower growth in  $M_1$ , it is difficult to pinpoint the timing. Experience makes it clear that interest rates affect money demand with a lag, but the exact timing of this effect is uncertain. Moreover, shifts in demand for financial assets, given interest rates, are notoriously hard to predict, since they depend to a great extent on the mysterious elements that work on consumer and investor confidence. At the present time, the staff expects  $M_1$  growth to average a little over 7 per cent in August and September together, which would lead to a 9 per cent growth rate for the third quarter. In the fourth quarter, we would expect a drop in the growth rate to around 4 per cent, despite the increase in purely transactions balances required to finance the accelerated growth in nominal GNP expected in the fall. Under alternative B, growth is expected to be only about 1/2 percentage point lower than under alternative A in the third quarter, but about 1-1/2 percentage points lower in the fourth quarter.

(13) Time and savings deposits other than large CD's are expected to grow much less rapidly over coming months than in the second quarter, given the recent weakening in such deposits and continued relatively attractive market interest rates. Thus, under alternative A, growth in  $M_2$  is expected to drop to a 6-1/2 per cent annual rate in August, and to 8 per cent in the third quarter; growth would be a little slower under alternative B.

(14) Growth in the adjusted bank credit proxy during August and September is expected to be more rapid than in recent months, and the growth rate for the third quarter may be around 9 per cent. Business loan demands are expected to remain fairly weak until around the fourth quarter, but banks are likely to be substantial net buyers of forthcoming Treasury offerings, including the bills to be announced toward the end of August. Banks have obtained a sizable amount of large CD funds in recent weeks, reflecting in part investment by AT&T of the proceeds of its recent preferred stock offering. The last payment on the offering will be made in late July. Apart from this and any investment of foreign funds in CD's, only a modest net growth in large CD's is expected until business loan demands pick up.

(15) The deposit patterns described above for alternative A imply a 7-1/2 per cent annual rate of increase in total reserves, seasonally adjusted, from June to September, assuming excess reserves average about \$225 million. In August total reserves are expected to rise by about 13-1/2 per cent, reflecting in part the increase in required reserves resulting from the expected expansion in U.S. Government demand deposits in

the latter half of July and early August and from the lagged effects of the anticipated July money supply expansion. On the assumption that the average level of borrowings is about unchanged from July and August, nonborrowed reserves would grow at about the same rate as total reserves in August; for the third quarter as a whole, however, nonborrowed would be expected to grow at a slower rate of about 3 per cent in view of the sharp drop in such reserves in July. Reserve growth would be somewhat less under alternative B, particularly for nonborrowed reserves, with part of the drop-off in nonborrowed offset by increased borrowing. The following table shows monthly average levels of total and nonborrowed reserves (in millions of dollars)--both seasonally adjusted and unadjusted --believed to be consistent with alternatives A and B.

	<u>Alt. A</u>		<u>Alt. B</u>	
	<u>Seasonally Adjusted<sup>1/</sup></u>	<u>Not Seasonally Adjusted</u>	<u>Seasonally Adjusted<sup>1/</sup></u>	<u>Not Seasonally Adjusted</u>
	Total Reserves			
July	31,339	30,602	31,339	30,602
August	31,693	30,416	31,669	30,384
September	31,888	30,531	31,824	30,469
	Nonborrowed Reserves			
July	30,443	29,683	30,438	29,679
August	30,825	29,516	30,675	29,358
September	31,050	29,631	30,836	29,419

<sup>1/</sup> The level of this series also reflects step adjustments made in the past to avoid discontinuities because of reserve requirement changes.

(16) The slowing of growth in  $M_1$  and accompanying reserve developments under alternative A would not be expected to lead to higher interest rates in either short- or long-term markets, at least in the

immediate future. For one thing, growth in the demand for money is likely to be abating. Also the credit demands of corporations and State and local governments in bond markets are expected to continue around the somewhat more moderate dimensions of the past month or two, and thereby take some rate pressure off long-term markets. In addition, Treasury cash borrowing demands during the third quarter are turning out to be somewhat less than expected in view of the low level at which the Treasury is running its cash balance. In the fourth quarter, however, Treasury cash borrowing is expected to be substantial.

(17) The tighter money market conditions assumed under alternative B could lead to a fairly substantial upward interest rate adjustment over the near term. The market at present appears to be uncertain as to how far the System intends to go in combatting high monetary growth rates, and in that respect would be very sensitive to upward movements in the Federal funds rate. With further tightening in the money market, market expectations of another rise in the discount rate--and possibly the prime rate--at a time when a Treasury refunding is in process could lead to strong protective measures by dealers and other active participants. Higher short- and long-term interest rates could also begin to impinge more substantially on savings inflows to nonbank thrift institutions. At the same time, however, it is not clear that the upward interest rate pressures would be long sustained, particularly in long-term markets, in view of the likelihood that credit demands will be moderate and the possibility that a further move toward achieving lower monetary growth rates would over time have a constructive influence on market psychology.

Possible directive language

(18) This section presents possible language for the second paragraph of the directive corresponding to the two alternative policy courses discussed above.

(19) Alternative A. This language is proposed for possible use if the Committee decides to call for maintaining about the money market conditions that have recently been attained, subject to a proviso clause.

~~"To implement this policy, the Committee seeks to achieve more moderate growth in monetary aggregates over the months ahead, taking account of developments in capital markets. System open market operations until the next meeting of the Committee shall be conducted with a view to MAINTAINING PREVAILING achieving bank reserve and money market conditions; consistent with these objectives PROVIDED THAT SOMEWHAT FIRMER CONDITIONS SHALL BE SOUGHT, TAKING ACCOUNT OF THE CURRENT TREASURY FINANCING AND OF DEVELOPMENTS IN CAPITAL MARKETS, IF IT APPEARS THAT THE MONETARY AND CREDIT AGGREGATES ARE SIGNIFICANTLY EXCEEDING THE GROWTH PATHS EXPECTED."~~

If the Committee adopts this alternative, it may wish to consider the money market conditions noted for alternative A in paragraph (9) as a description of "prevailing" conditions, and for purposes of the proviso clause to adopt the aggregate growth paths discussed earlier in connection with alternative A as the "expected" paths. The proviso clause has been formulated in one-way terms, guarding against excesses but not shortfalls, on the assumption that the

Committee would not want money market conditions to be eased in the coming period if the aggregates should fall short of the indicated paths. The proposed language contemplates that in making operating decisions under the proviso clause the Manager would take account of both the current Treasury financing and developments in capital markets.

(20) Alternative B. This language is proposed for possible use if the Committee decides to hold to the course of continued orderly firming of bank reserve and money market conditions, insofar as that might be necessary to maintain downward pressure on the growth rates of the aggregates and insofar as such firming proves to be feasible in light of the current Treasury financing. As will be noted, the language is identical to that adopted at the June 29 meeting except for the inclusion of the Treasury financing, as a factor to be taken into account, along with developments in capital markets.

"To implement this policy, the Committee seeks to achieve more moderate growth in monetary aggregates over the months ahead, taking account of THE CURRENT TREASURY FINANCING AND OF developments in capital markets. System open market operations until the next meeting of the Committee shall be conducted with a view to achieving bank reserve and money market conditions consistent with those objectives."

If the Committee adopts this alternative it may wish to instruct the Manager to seek to firm money market conditions within the ranges mentioned earlier in connection with this alternative--including the proposed 5-1/2 to 6 per cent range for the Federal funds rate--to the extent feasible in light of the Treasury financing and capital market conditions. unless the monetary

aggregates appear to be increasing at rates well below those discussed earlier under alternative B. On the other hand, the formulation of this alternative--with its greater emphasis on monetary aggregates--would also be consistent with the specifications of alternative A (or some modification thereof) since a more moderate growth in  $M_1$  in particular is indicated in the paths associated with alternative A.

**NOTES:** Aggregate reserve series have been adjusted to eliminate changes in percentage reserve requirements against deposits, but reserve requirements on Euro-dollar borrowings are included beginning October 16, 1969, and requirements on bank-related commercial paper are included beginning October 1, 1970. Adjusted credit proxy includes mainly total member bank deposits subject to reserve requirements, bank-related commercial paper, and Euro-dollar borrowings of U. S. banks. Weekly data are daily averages for statement weeks. Monthly data are daily averages except for nonbank commercial paper figures which are for last day of month.
