

Prefatory Note

The attached document represents the most complete and accurate version available based on original copies culled from the files of the FOMC Secretariat at the Board of Governors of the Federal Reserve System. This electronic document was created through a comprehensive digitization process which included identifying the best-preserved paper copies, scanning those copies,¹ and then making the scanned versions text-searchable.² Though a stringent quality assurance process was employed, some imperfections may remain.

Please note that some material may have been redacted from this document if that material was received on a confidential basis. Redacted material is indicated by occasional gaps in the text or by gray boxes around non-text content. All redacted passages are exempt from disclosure under applicable provisions of the Freedom of Information Act.

¹ In some cases, original copies needed to be photocopied before being scanned into electronic format. All scanned images were deskewed (to remove the effects of printer- and scanner-introduced tilting) and lightly cleaned (to remove dark spots caused by staple holes, hole punches, and other blemishes caused after initial printing).

² A two-step process was used. An advanced optical character recognition computer program (OCR) first created electronic text from the document image. Where the OCR results were inconclusive, staff checked and corrected the text as necessary. Please note that the numbers and text in charts and tables were not reliably recognized by the OCR process and were not checked or corrected by staff.

MONETARY AGGREGATES AND MONEY MARKET CONDITIONS

Prepared for the Federal Open Market Committee

By the Staff

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

April 12, 1974

MONETARY AGGREGATES AND
MONEY MARKET CONDITIONS

Recent developments

(1) M_1 grew at a 10.6 per cent annual rate in March, a little more than projected in the last bluebook. Although growth in April is estimated to be somewhat slower, on average, the extent of the slowing is now expected to be less than anticipated. Thus, for the two months combined, M_1 now appears to be expanding at slightly above a 9 per cent annual rate, compared with the Committee's $5\frac{1}{2}$ to $8\frac{1}{2}$ per cent range of tolerance adopted at the last meeting. Growth of M_2 , on the other hand, appears to be within the Committee's two-month range of tolerance, as shown in the table below. With business loan demands very strong, and with large CD run-offs expected around the tax date, banks have bid actively for large CD's and non-deposit sources of funds. As a result, expansion of the adjusted credit proxy has been much more rapid than anticipated--accelerating to a 12 per cent annual rate in March, and a projected 23 per cent annual rate in April.

Growth of Monetary Aggregates and RPD's
in March-April Target Period

<u>Reserve and Monetary Aggregates (Growth at SAAR in per cent)</u>	<u>Range of Tolerance</u>	<u>Latest Estimates</u>
RPD's	4 - 7	14.1
M_1	$5\frac{1}{2}$ - $8\frac{1}{2}$	9.2
M_2	$6\frac{1}{2}$ - $9\frac{1}{2}$	8.8
Memo:		Ave. for Statement
Federal funds rate		<u>week ending</u>
(per cent per annum)	9 - $10\frac{1}{2}$	March 20 - 9.33
		April 10 - 10.02

(2) Because of the rapid expansion in CD's and bank credit, RPD growth appears likely to be well in excess of the upper limit of its range of tolerance. As may be seen from the table below, CD's and nondeposit sources absorbed considerably more reserves than originally expected. Private demand deposits also absorbed more reserves than expected, but the overshoot was considerably less than for CD's.

CD's and nondeposit funds	-26	406
<u>Excess</u>	<u>33</u>	<u>35</u>

1/ Changes from February to April 1974.

(3) In accordance with the discussion at the March 19 meeting, early in the inter-meeting period the Desk sought reserve conditions that would raise the Federal funds rate from the 9½ per cent level just reached at the time of the meeting to a level more consistent with the Committee's desires with respect to the monetary aggregates. Early action was considered desirable because of expected Treasury financing operations

at the end of March; a tax bill was auctioned on March 26 and a 2-year note on March 28. As the aggregates strengthened, the Desk became an even more reluctant supplier of nonborrowed reserves. By the close of the period, reserve operations were expected to be consistent with a Federal funds rate of 10 per cent or somewhat higher. Over the three full statement weeks ending within the inter-meeting period, member bank borrowing at Federal Reserve Banks has averaged nearly \$1.5 billion, about \$350 million larger than in the three preceding statement weeks.

(4) The combination of heavy business credit demands, tighter money market conditions, and developing evidence that the economy was not so weak as anticipated contributed to large across-the-board interest rate advances during the inter-meeting period. Advances in short-term rates ranged generally from 50 to 100 basis points. With rates on commercial paper and large bank CD's rising steeply, major banks came under particularly heavy pressure as both their business loans and the costs of funds to cover such loans increased. Reflecting this squeeze, the bank prime rate moved upward in rapid sequence from $8\frac{3}{4}$ at the time of the last meeting to 10 per cent at a number of banks in the latest week. Bond yields rose 35 to 75 basis points during the period, with the consequent sudden large capital losses leading to some unsettlement in markets.

(5) Very recently, however, securities markets have shown some signs of stabilizing. This week's offerings of new corporate and municipal securities have been well received at the higher interest rate levels, and yields on some key U.S. Government securities have edged a little lower. Yield declines were quite sharp in the bill market, where

there is a technical shortage of supply. The 3-month Treasury bill, for example, has traded most recently at 8.25 per cent, down from the recent high of 8.65 per cent.

(6) The large recent increases in rates on competing market securities have begun to exert pressures on non-bank financial intermediaries. While flows to these institutions remained quite favorable in March, New York City savings banks--typically the first to suffer from disintermediation--experienced large withdrawals in early April, comparable in relative magnitude to those of early April 1970. Industry reports suggest that intermediaries generally are taking a more cautious approach on mortgage commitments, and the most sensitive interest rates in mortgage markets have begun to rise.

(7) The table on the next page shows (in percentage annual rates of change) selected monetary and financial flows over various recent time periods. Appendix Table III compares money supply growth rates computed on a quarterly-average basis with those computed on a last-month-of-quarter basis. Projected figures on the two bases are shown in appendix Table IV for the three alternatives presented in the next section.

	Average of Past 3 Calendar Years	Past 12 Months	Past 6 Months	Past 3 Months	Past Month
	1971 -- 1973	Mar. '74 over Mar. '73	Mar. '74 over Sept. '73	Mar. '74 over Dec. '73	Mar. '74 over Feb. '74
Total reserves	8.5	6.5	3.9	1.7	-5.3
Nonborrowed reserves	7.6	8.6	7.5	1.6	-9.8
Reserves available to support private non- bank deposits	8.8	8.9	3.9	6.2	12.1
<u>Concepts of Money</u>

<u>Bank Credit</u>					
Total member banks deposits (bank credit proxy adj.)	10.5	8.2	6.0	8.6	11.9
Loans and investments of commercial banks ^{2/}	12.8	11.7	10.4	16.2	17.1
<u>Short-term market paper</u> (Monthly avg. change in billions)					
Large CD's	1.0	1.1	0.2	1.6	1.1
Nonbank commercial paper	0.2	0.7	0.9	0.6	-2.3

^{1/} Other than interbank and U.S. Government.

^{2/} Based on month-end figures. Includes loans sold to affiliates and branches.

NOTE: All items are based on averages of daily figures, except for data on total loans and investments of commercial banks, commercial paper, and thrift institutions--which are derived from either end-of-month or last Wednesday-of-month figures. Growth rates for reserve measures in this and subsequent tables are adjusted to remove the effect of discontinuities from breaks in the series when reserve requirements are changed.

Prospective developments

(8) Alternatives presented for Committee consideration are summarized below (with more detailed figures shown in the table on p. 6a).

	<u>Alt. A</u>	<u>Alt. B</u>	<u>Alt. C</u>
Targets (2nd & 3rd qtrs. combined)			
M_1	$6\frac{1}{2}$	6	$5\frac{1}{2}$
M_2	$8\frac{1}{2}$	$7\frac{1}{2}$	$6\frac{1}{2}$
Credit proxy	$11\frac{1}{2}$	$10\frac{1}{2}$	$9\frac{1}{2}$
Associated ranges for April-May			
RPD	$10\frac{1}{4}$ -- $12\frac{1}{2}$	$9\frac{1}{2}$ -- $11\frac{1}{2}$	$8\frac{1}{4}$ -- $10\frac{1}{2}$
M_1	$6\frac{1}{2}$ -- $8\frac{1}{2}$	6--8	$5\frac{1}{2}$ -- $7\frac{1}{2}$
M_2	$7\frac{1}{2}$ -- $9\frac{1}{2}$	$6\frac{1}{2}$ -- $8\frac{1}{2}$	$6\frac{1}{2}$ -- $8\frac{1}{2}$
Federal funds rate range (inter-meeting period)	$8\frac{1}{2}$ -- $10\frac{1}{2}$	$9\frac{1}{2}$ -- $10\frac{1}{2}$	$9\frac{1}{2}$ -- $11\frac{1}{2}$

(9) Alternative C represents continuation of the strategy with regard to the aggregates adopted by the Committee at its last meeting. That is, the alternative contemplates return of M_1 to the $5\frac{1}{2}$ per cent long-run growth path (depicted in the chart on the following page) by September. Accomplishing this would appear to require interest rates somewhat higher than indicated at the last meeting, and also higher than those currently prevailing, in view of the stronger growth in nominal GNP that is now projected for the second and third quarters. The Federal funds rate range for the inter-meeting period thought to be consistent with the alternative C pattern for the aggregates is $9\frac{1}{2}$ -- $11\frac{1}{2}$ per cent, centering on $10\frac{1}{2}$ per cent.

(10) Alternative B calls for somewhat more rapid growth in the monetary aggregates over the second and third quarters, typified by a 6 per cent growth rate for M_1 . The B growth rates seem obtainable with little further significant change in money market conditions and short-term interest rates, in light of the sharp increases in short-term rates that have already occurred during the past two months. Thus, the Federal funds rate under this alternative centers around 10 per cent. The still more rapid longer-run growth rates of alternative A--including a $6\frac{3}{4}$ per cent rate for M_1 over the second and third quarters--appear likely to be associated with declines in both short- and long-term interest rates.

(11) Over the April-May period, M_1 growth is likely to be somewhat above the long-run path. Under alternative B, for example, M_1 growth is indicated in the 6--8 per cent range. These above-path increases reflect in large part the sizable expansion in M_1 currently estimated for April. Given the lagged relationship between interest rates and money demand, however, M_1 growth is expected to moderate later as it approaches the longer-run path.

(12) Between now and mid-May, short-term interest rates could decline somewhat under alternative B. Indeed, the very recent drop in the 3-month bill rate probably is anticipating some of the potential for downward rate adjustments. Any decline that did develop over the next few weeks is very likely to be temporary, assuming a 10 per cent Federal funds rate. Over the longer run, the 3-month bill rate would seem most likely to fluctuate around a $8\frac{1}{2}$ -- $8\frac{3}{4}$ per cent range.

(13) A number of factors might contribute to temporary easing in short-term markets in the weeks immediately ahead. The extremely large issuance of new CD's by banks, which has contributed to recent upward pressures on short-term rates, has partly reflected advance preparation for large tax date maturities, and those pressures should abate after mid-April. Funds from large oil payments in April may also become available to the short-term sector of U.S. credit markets via U.S. banks' use of the Euro-dollar market. In addition, that portion of the \$4½ billion of maturing April tax bills not turned in for taxes would generate reinvestment demand for short-term securities. Finally, the Treasury's May refunding--to be announced on May 1--might include some cash redemption of the \$5½ billion of maturing publicly held debt because of the possibility of debt ceiling problems.

(14) A rise in the funds rate over the next few weeks--such as would be likely under alternative C-- would generate market expectations of a further tightening of monetary policy. This would offset any tendency for short-term rates to decline, even temporarily, and would probably result in further upward adjustments. Over the next few months, the 3-month bill rate could be around 9 per cent, and possibly higher in the summer when Treasury cash borrowing demands are seasonally strong.

(15) Under alternative B, with market interest rates little changed on balance from current high levels, net savings inflows to nonbank thrift institutions are likely to be slower than the 8 per cent first-quarter pace. We would estimate a growth rate of about 6 per cent in the second quarter and 4 per cent in the third, assuming no change in

Regulation Q. Under alternative C, these institutions would come under greater pressure, of course, but in either case some tightening in the availability of mortgage loan commitments would be likely, compared with the situation in the early months of the year.

(16) Net inflows to commercial banks of time and savings deposits other than large CD's are likewise expected to be slower over the months ahead than in the first quarter, though the experience of banks may continue to be somewhat better than at thrift institutions. Commercial banks appear to be having greater success than the specialized thrift institutions in attracting large time deposits (those of \$100,000 or more) that are not subject to Regulation Q ceilings. Such deposits are reported as part of the other time and savings category and, unlike large negotiable CD's, are included in the M_2 measure.

(17) We would expect banks to offset some part of any loss in other time and savings deposits through increased issuance of large CD's or greater borrowing in the Euro-dollar market, depending on relative costs. However, under any of the alternatives presented, the amount of borrowing by banks through CD's and nondeposit sources is expected to be considerably less than in recent weeks, partly because preparations for tax-date run-offs will have been completed and partly because business loan demand on banks is expected to moderate from the exceptionally rapid pace of March. Moreover, it is probable that the spread between the bank lending rate and the commercial paper rate will favor bank credit less than was the case in March.

(18) In intermediate- and long-term debt markets, demands are likely to remain strong over the weeks ahead. Corporate and State and local government bond offerings remain quite high, despite recent postponements. Also, the Treasury refunding will probably involve marketing securities with mainly intermediate-term maturities. Given the volume of private and governmental securities in prospect, bond yields could rise considerably further under alternative C. High-grade corporate issues, which are already above their summer highs, could approach their 1970 peaks, and Treasury notes and bonds could rise above them (the 20 year Treasury bond is already above the earlier peak). Under alternative B, further upward adjustments in bond yields are likely to be comparatively modest, given the increases that already have occurred and the stabilizing tendencies that we would expect in short-term markets.

(19) Under alternative A, savings inflows to thrift institutions would be expected to recover to close to their first-quarter pace, as receding market rates provide less competition for savings funds. At banks, deposits inflows--both demand and consumer-type time and savings--would probably be well sustained. As a result, credit demands could be financed without banks adding to pressures on credit markets through aggressive issuance of large CD's or reductions in portfolio liquidity.

Proposed directive language

(20) Presented below are three alternative formulations for the operational paragraph of the directive, which are intended to correspond to the similarly lettered policy alternatives discussed in the preceding section. For all three alternatives, it is proposed to include a reference to Treasury financing because the regular May refinancing will be announced on May 1.

Alternative A

To implement this policy, while taking account of THE FORTHCOMING TREASURY FINANCING AND OF international and domestic financial market developments, ~~including the prospective-Treasury-financing;~~ the Committee seeks to achieve bank reserve and money market conditions ~~that-would-moderate~~ CONSISTENT WITH growth in monetary aggregates over the months ahead SUFFICIENT TO ACCOMMODATE MODERATE EXPANSION IN REAL GNP AT THE HIGHER DOLLAR VALUES NOW PREVAILING.

Alternative B

To implement this policy, while taking account of THE FORTHCOMING TREASURY FINANCING AND OF international and domestic financial market developments, ~~including the-prospective-Treasury-financing;~~ the Committee seeks to achieve bank reserve and money market conditions that would moderate SOMEWHAT growth in monetary aggregates over the months ahead.

Alternative C

To implement this policy, while taking account of THE FORTHCOMING TREASURY FINANCING AND OF international and domestic financial market developments, ~~including the prospective-Treasury-financing~~; the Committee seeks to achieve bank reserve and money market conditions that would moderate growth in monetary aggregates over the months ahead.

(21) In the event that the Committee wishes to couch the operational paragraph of the directive in terms of money market conditions, the specifications of alternative B might be associated with language indicating that "...the Committee seeks to maintain about the prevailing money market conditions, provided that the monetary aggregates appear to be growing at rates within the specified ranges of tolerance."

1/ Represents change in System's portfolio from end-of-period to end-of-period, includes redemptions in regular bill auctions.

2/ Represents change in daily average level for preceding period.

3/ Includes matched sale-purchase transactions as well as RP's.

4/ Sum of changes in vault cash, currency in circulation, Treasury operations, F.R. float, gold and foreign accounts, and other F.R. accounts.

5/ Reserves to support private nonbank deposits. Target change for March and April reflects the target adopted at the March 19, 1974 FOMC meeting. Target change for previous months reflects the bluebook patterns that are consistent with target ranges that were adopted during the month.

NOTE: Government security dealer trading positions are on a commitment basis. Trading positions, which exclude Treasury bills financed by repurchase agreements maturing in 16 days or more, are indicators of dealer holdings available for sale over the near-term. Other security dealer positions are debt issues still in syndicate, excluding trading positions. The basic reserve deficit is excess reserves less borrowing at Federal Reserve less net Federal funds purchases. Weekly data are daily averages for statement weeks, except for corporate and municipal issues in syndicate which are Friday figures.

* STRICTLY CONFIDENTIAL

** Monthly averages for excess reserves and borrowings are weighted averages of statement week figures.

NOTES: Weekly data for columns 1 to 4 are statement week averages of daily data. Columns 5 and 6 are one-day Wednesday quotes. For Columns 7, 8 and 10 the weekly date is the mid-point of the calendar week over which data are averaged. Column 9 is a one-day quote for Thursday following the end of the statement week. Column 11 gives FNMA auction data for the Monday preceding the end of the statement week. The FNMA auction yield is the average yield in the bi-weekly auction for short-term forward commitments for Government underwritten mortgages.

^{1/} Estimated monthly average levels derived by averaging end of current month and end of previous month reported data. p - Preliminary.
NOTE: Reserve requirements on Eurodollar borrowings are included beginning October 16, 1969, and requirements on bank-related commercial paper are included beginning October 1, 1970. Adjusted credit proxy includes mainly total member bank deposits subject to reserve requirements, bank-related commercial paper and Eurodollar borrowings of U.S. banks. Weekly data are daily averages for statement weeks. Monthly data are daily averages except for nonbank commercial paper figures which are for last day of month. Weekly data are not available for M₃, total loans and investments and thrift institution deposits.

Appendix Table III

Growth Rate in Money Supply
(Per cent change at an annual rate)

		<u>M₁</u>		<u>M₂</u>		<u>M₃</u>	
		<u>M</u>	<u>Q</u>	<u>M</u>	<u>Q</u>	<u>M</u>	<u>Q</u>
1972	I	9.0	5.3	12.3	11.0	14.6	13.2
	II	6.2	8.2	8.9	9.8	10.9	12.0
	III	8.7	8.2	10.8	10.8	12.8	12.6
	IV	9.9	8.4	10.6	10.2	11.8	11.8
1973	I	3.8	7.0	6.9	8.8	9.4	10.7
	II	11.5	7.5	11.1	8.7	10.4	9.1
	III	-0.2	5.5	5.2	7.9	4.5	7.2
	IV	7.5	3.9	10.1	8.5	9.2	7.3
1974	I	6.7	5.5	9.5	9.3	9.0	8.8

M = Annual rates of growth calculated from average levels in the final months of the quarters.

Q = Annual rates calculated from average levels in all three months of the quarters.

Appendix Table IV

Growth Rates in Money Supply for Alternatives
(Per cent change at an annual rate)

	<u>M₁</u>		<u>M₂</u>		<u>M₃</u>	
	<u>M</u>	<u>Q</u>	<u>M</u>	<u>Q</u>	<u>M</u>	<u>Q</u>
	<u>Alt. A</u>					
1974 II	7.1	8.8	8.2	9.0	7.6	8.7
III	6.4	6.5	8.3	8.1	6.9	7.2
II & III combined	6.7	7.7	8.2	8.6	7.2	8.0
	<u>Alt. B</u>					
1974 II	6.5	8.5	7.5	8.6	6.3	7.9
III	5.7	5.8	7.0	6.9	5.9	6.1
