## Flow of Funds Summary Statistics Second Quarter 2001

Domestic nonfinancial debt grew at a seasonally adjusted annual rate of 5-1/2 percent in the second quarter of 2001, near the pace in the first quarter of the year. An increase in borrowing by nonfederal sectors was about offset by a larger paydown of federal debt.

Federal government debt contracted at a 6-1/2 percent rate in the second quarter, following little change in the first quarter. Since the peak in early 1998, federal government debt has dropped by about \$570 billion, or 15 percent.

Household debt expanded at a 9-1/4 percent rate in the second quarter. Home mortgage debt growth picked up to an 11-1/2 percent rate. In contrast, consumer credit decelerated to a 4-1/2 percent rate, the slowest in two years. In the nonfinancial business sector, debt grew at a 7-1/4 percent rate in the second quarter, faster than the previous quarter but still below last year's pace. A large increase in net issuance of bonds and commercial mortgages was partially offset by a contraction in commercial paper and borrowing at banks. State and local government debt increased at an 8-1/2 percent rate in the second quarter, with substantial issuance of advance-refunding bonds and robust borrowing for new capital projects.

The level of domestic nonfinancial debt outstanding was \$18.8 trillion at the end of the second quarter. Debt of nonfederal sectors was \$15.5 trillion, and federal debt was \$3.3 trillion.

## Flow of Funds Accounts, Second Quarter 2001

---

This publication presents the flow of funds accounts for 2001:Q2.

**Data revisions and other changes.** The statistics shown in these tables reflect the use of new or revised source data. Most significant revisions appear in recent quarters; however, new source information resulted in changes to data for earlier periods. The revisions include the following:

1. Seasonal factors for quarterly financial flows have been recalculated for the period 1991:Q1 onward. The factors were generated using the Statistics Canada X-12-ARIMA/88 seasonal adjustment program.
2. The statistics in this publication reflect the annual revisions to the national income and product accounts for 1998 forward released by the Department of Commerce on July 27, 2001, and subsequent information for 2001:Q2 released on August 29, 2001. The August 2001 issue of the *Survey of Current Business* details the major features of the annual revision of the national income and product accounts.
3. In the nonfarm noncorporate business sector (tables F.103 and L.103), data have been revised from 1981:Q1 forward to reflect methodological changes which incorporated data from the 1987, 1993, and 1998 National Survey of Small Businesses and new source data for partnerships and sole proprietorships from the Internal Revenue Service *Statistics of Income* for 1998.
4. Revisions to the rest of the world sector (tables F.107 and L.107) reflect new estimates of the balance of payments from the Department of Commerce for the period 1989-2000. The revisions are detailed in the July 2001 *Survey of Current Business*.
5. In the GSE sector (tables F.124 and L.124), holdings of mortgage-backed securities, previously included in the agency and miscellaneous assets categories, have been reallocated across the agency, municipal, and corporate and foreign securities categories.
6. In the nonprofit sector (supplementary tables F.100.a and L.100.a), data for 1998 have been added to

reflect newly available information from the Internal Revenue Service/Statistics of Income division.

**Explanatory notes for tables D.1, D.2, and D.3.** Domestic debt comprises credit market funds borrowed by U.S. entities from both domestic and foreign sources, while foreign debt represents amounts borrowed by foreign financial and nonfinancial entities in U.S. markets only. Financial sectors consist of government-sponsored enterprises, federally related mortgage pools, and private financial institutions. Credit market debt consists of debt securities, mortgages, bank loans, commercial paper, consumer credit, U.S. government loans, and other loans and advances; it excludes trade debt, loans for the purpose of carrying securities, and funds raised from equity sources.

Growth rates in table D.1 are calculated by dividing seasonally adjusted flows from table D.2 by seasonally adjusted levels at the end of the previous period from table D.3. Seasonally adjusted levels in flow of funds statistics are derived by carrying forward year-end levels by seasonally adjusted flows. Growth rates calculated from changes in unadjusted levels printed in table L.2 can differ from those in table D.1.

**Relation of Flows to Outstandings.** Estimates of financial assets and liabilities outstanding are linked to data on flows. However, figures on outstandings contain discontinuities or breaks in series that could affect analysis of particular relationships over time. Specifically, outstandings in the flow of funds accounts are related to the flows in the following way:

$$\text{Outstanding}_t = \text{Outstanding}_{t-1} + \text{Flow}_t + \text{Discontinuity}_t$$

where "t" is the time period.

Discontinuities result from changes in valuation, breaks in source data, and changes in definitions. For most series, the value of the discontinuity is zero for nearly all time periods. However, in a few instances, the discontinuity is nonzero for almost all time periods, or is quite large in a particular quarter, such as a period when there is a sharp increase or decrease in equity prices or a major break in source data.

The discontinuities in a series can distort estimated rates of growth in assets and liabilities

between periods. In order to minimize these distortions, percentage changes in assets and liabilities in flow of funds releases should be calculated as:

$$\text{Percentage change}_t = (\text{Flow}_t / \text{Outstanding}_{t-1}) * 100$$

**Preliminary Estimates.** Figures shown for the most recent quarter in these tables are based on preliminary and incomplete information. A summary list of the principal sources of information available when the latest quarter's data were compiled is provided in a table following this introduction. The distinction between "available" data and "missing" data is not between final and preliminary versions of data, but rather between those source estimates that are fully ready when the latest quarterly publication is compiled and those that are not yet completed. However, the items that are shown as available are, in general, also preliminary in the sense that they are subject to revision by source agencies.

**Margins of Uncertainty.** Flow of funds statistics are subject to uncertainties resulting from measurement errors in source data, incompatibilities among data from different sources, potential revisions in both financial and nonfinancial series, and incomplete data in parts of the accounts. The size of these uncertainties cannot be quantified in precise statistical terms, but allowance for them is explicitly made throughout the accounts by the inclusion of "discrepancies" for various sectors and instrument types. A discrepancy for a sector is the difference between its measured sources of funds and its measured uses of funds. For an instrument category, a discrepancy is the difference between measured funds borrowed through the financial instrument and measured funds lent through that instrument. The size of such discrepancies relative to the main asset or liability components is one indication of the quality of source data, especially on an annual basis. For quarterly data, differences in seasonal adjustment procedures for financial and nonfinancial components

cancel in annual data.

**Availability of Data.** Flow of funds statistics are updated about ten weeks following the end of a quarter. This publication — the Z.1 release — is available from the Board's Publications Services. Flow of funds data are also available electronically through the Internet at the following location:

<http://www.federalreserve.gov/releases/Z1>

The Internet site also provides quarterly data beginning in 1952, organized in compressed files that correspond to the tables published in this release. There are files for quarterly data for seasonally adjusted flows, unadjusted flows, outstandings, balance sheets, and debt (tables D.1, D.2, and D.3). There is a separate file for monthly data from January 1955 onward for the debt aggregate published in the Board's H.6 statistical release, "Money Stock and Debt Measures."

A Guide to the Flow of Funds Accounts is available. The 1,200-page Guide, in two volumes, explains in detail how the U.S. financial accounts are prepared and the principles underlying the accounts. The Guide can be purchased for \$20.00 from the Board's Publications Services. Publications Services accepts orders accompanied by checks as well as credit card orders. The Internet site for this release at the location shown above contains a link to an order form for the Guide that can be mailed or faxed to Publications Services.

General notes: A = assets; L = liabilities. Domestic nonfinancial sectors (columns 9 and 10) are households and nonprofit organizations, nonfinancial business, state and local governments, and federal government. Equity included in line 2 is the sum of corporate equities (line 25) and equity in noncorporate business (line 33). The matrix shows a discrepancy in column 17 for monetary gold and SDRs (line 4) because by international accounting convention, such instruments are financial assets without corresponding liabilities.

Prior to 1985, all pension assets are assumed to have been in defined benefit plans.
